Conferencia Estadística de las Américas de la CEPAL

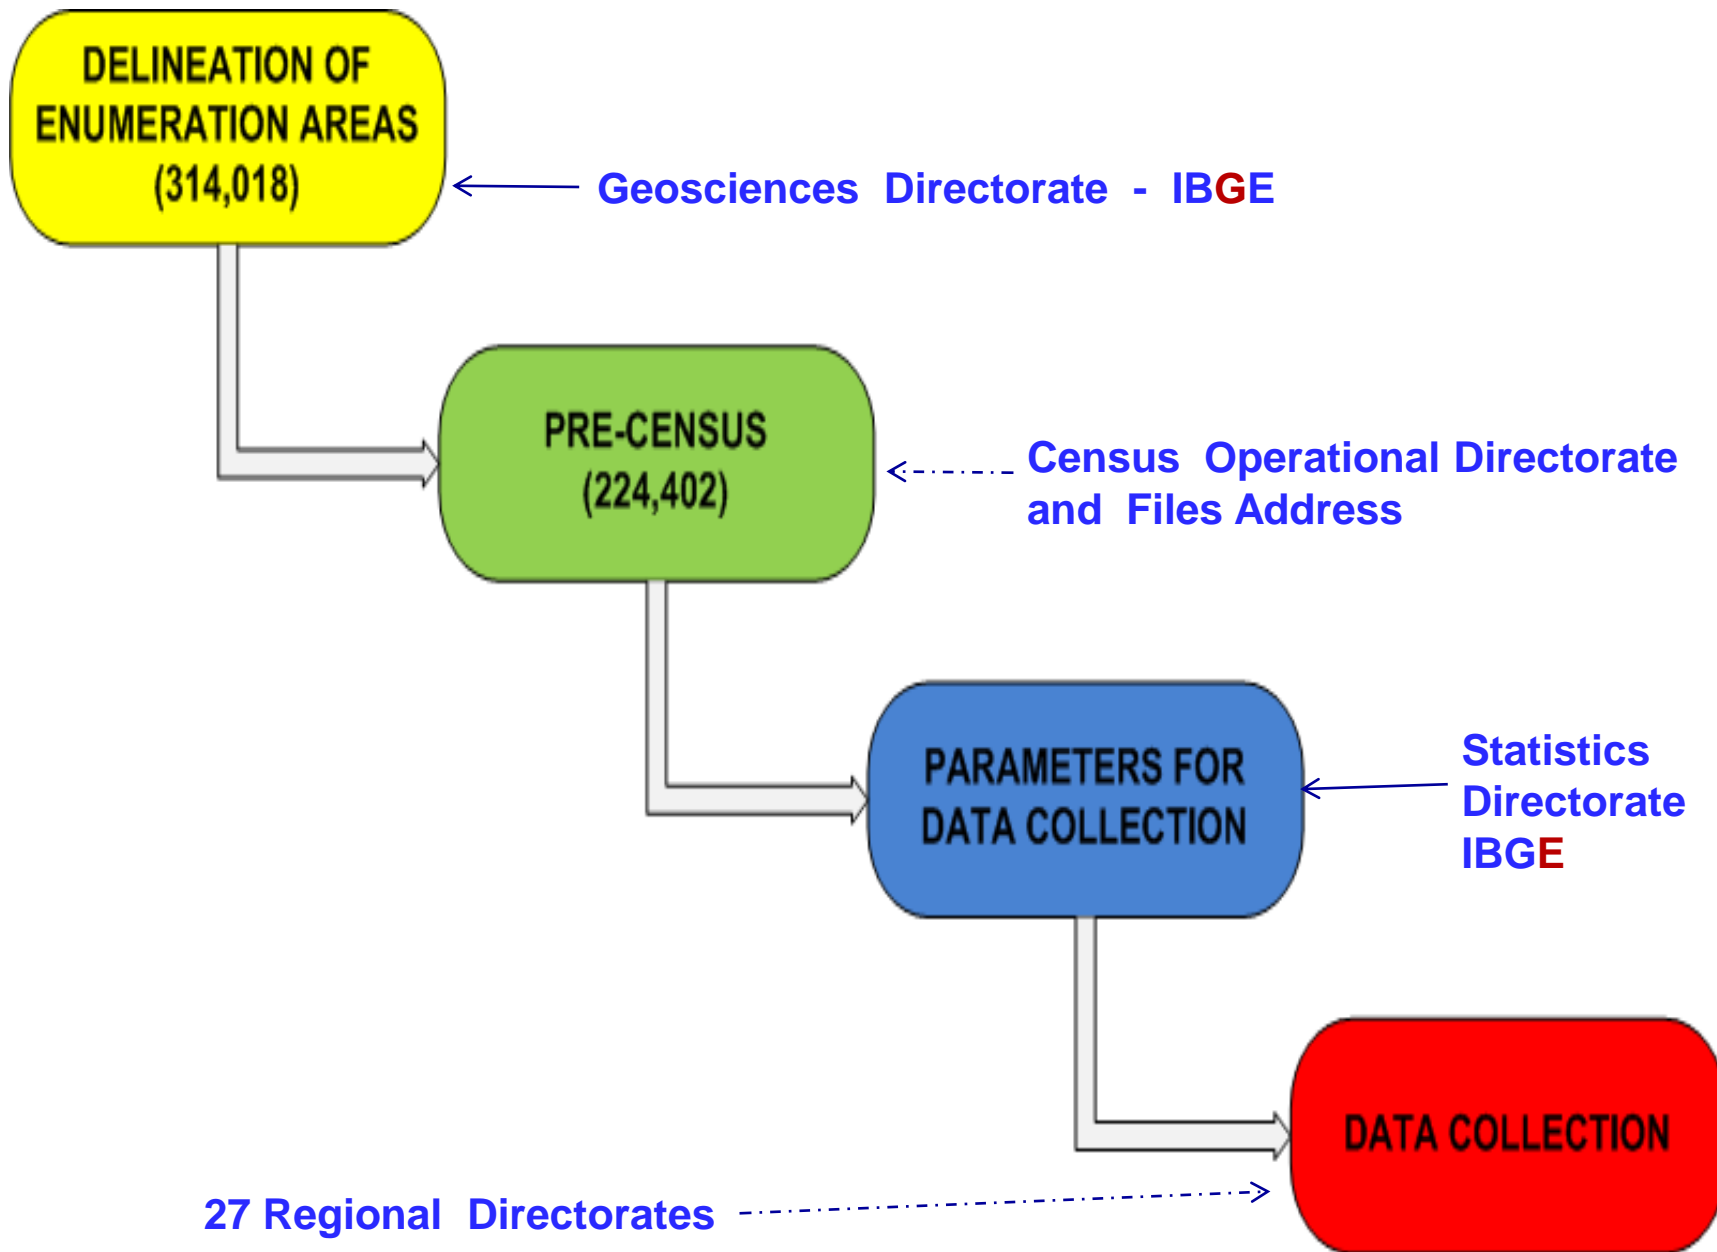

**The 2010 Brazilian Population Census: Quality
Control System for
Collection, Supervision and Data Processing**

Eduardo Pereira Nunes – President of IBGE

eduardo.nunes@ibge.gov.br

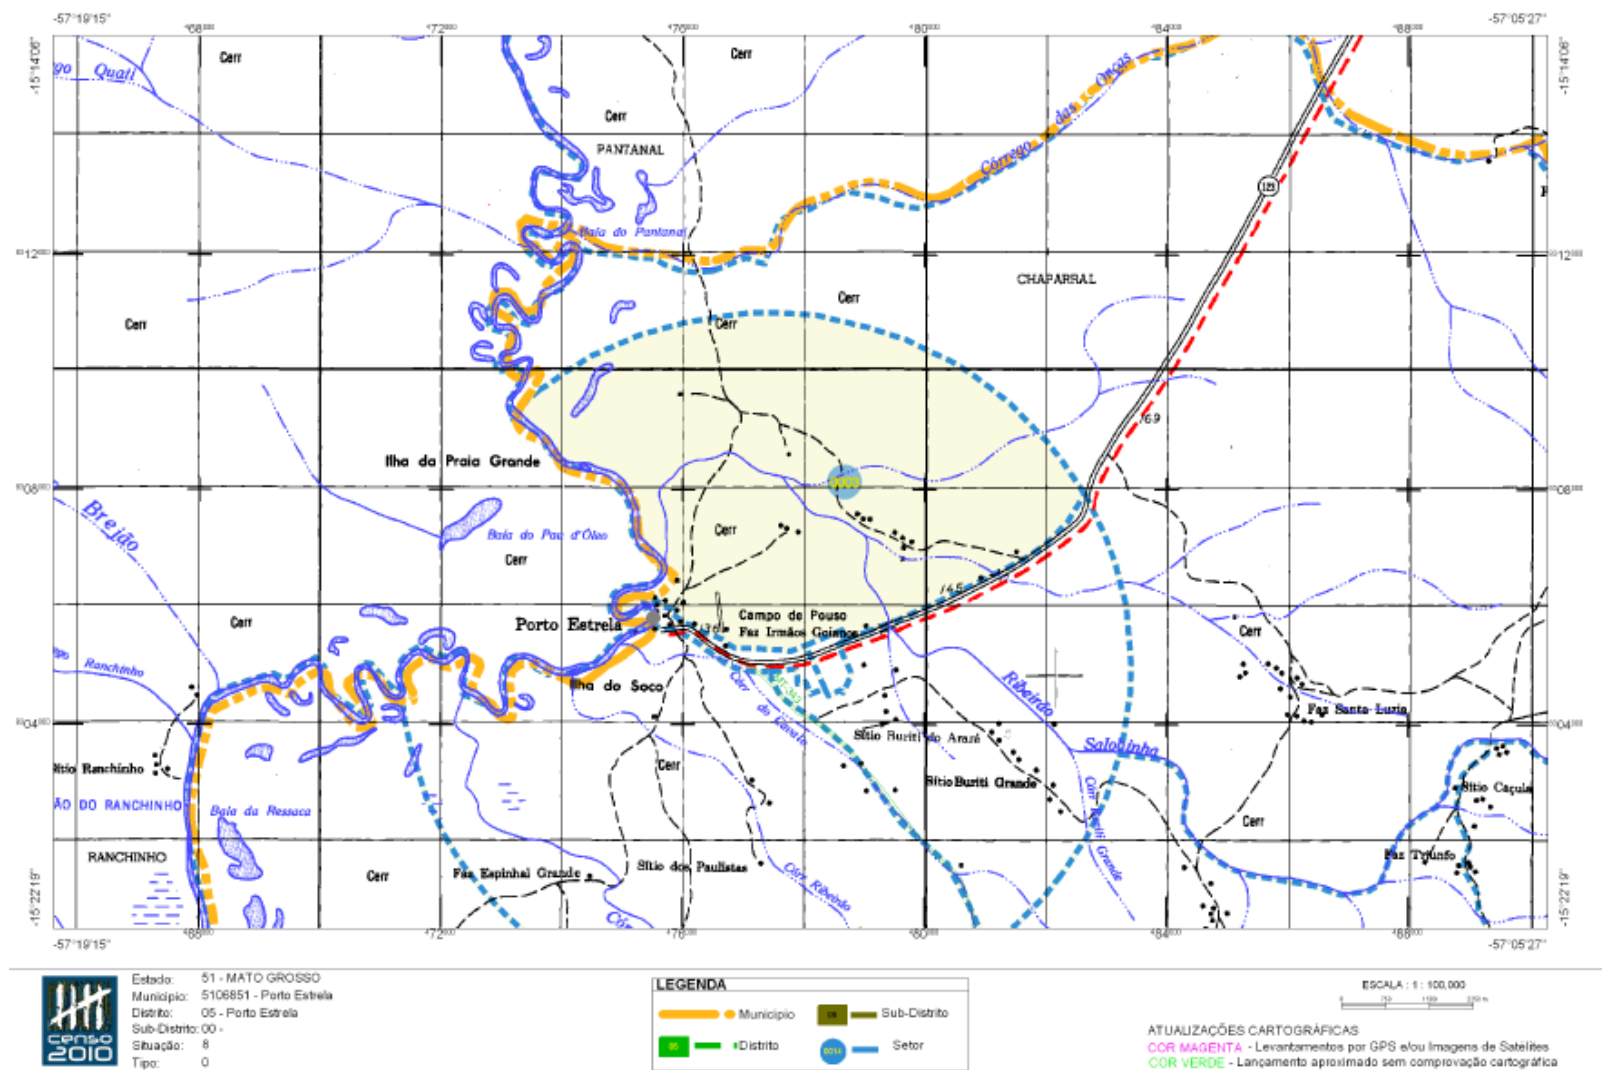

Havana, Cuba, 7th April, 2011

- **Brazilian Population Census produces information on the characteristics of people and households for each municipality**
- **Population Census is the main challenge for a Statistical Office, specially in a country like Brazil, with 8,514,876 km² distributed in an heterogeneous and sometimes inaccessible territory**
 - 27 Federation Units
 - 5,565 Municipalities
 - 318,000 enumerators area
 - 7,000 local offices
 - 32,000 supervisors and 190,00 enumerators
 - 67,491,720 million housing units
 - 190,732,694 inhabitants

- For 2010 Census, IBGE developed a Census Mapping Project to integrate Municipalities' urban and rural areas and built a full digital format, starting by using technology of satellite imagery
- **All 314,018 enumerator areas had a cartography geocoding**
- **Characteristics of 2010 Census Enumeration Areas**
 - Each enumerator area is a **continuous area** located at rural or urban places
 - Regards legal limits of boundaries of each municipality, districts and sub-districts
 - Urban EA: covers 300 / 350 housing units
 - Rural EA: covers 150 agricultural holdings (maximum 500 km²)

Enumeration Areas: Rural

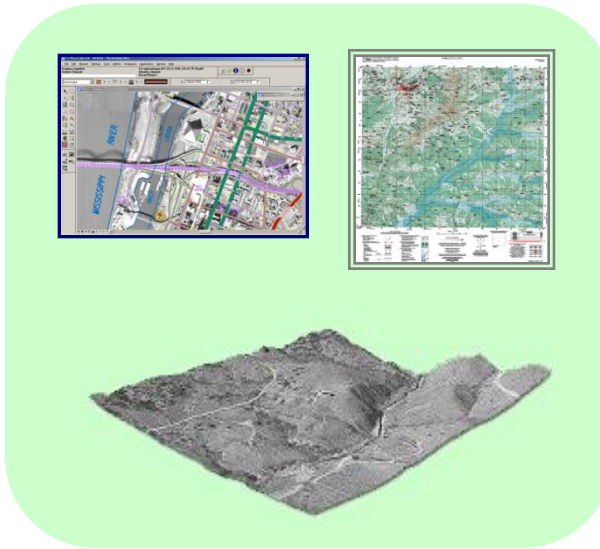

2010 Census Mapping

- **Building of an integrated Territorial Database to support 2010 Census, from the planning to the collection and dissemination steps:**
 - Associate the “National Address File for Statistical Purposes – CNEFE” file to the blocks and block-face urban enumeration areas;
 - Geometrical adjustment of urban and rural limits for each Municipality
- **SISMAP – Brazilian System for Census Mapping**
 - IT tool developed for municipal mapping in a single continuous spatial database;
 - Input data from several sources of vector and imagery data, like GIS, GPS, satellite imagery, digital and aerial photography

Handheld Devices (PDA)

GIS/Web

Low Cost Images

Growing Application at IBGE for both Cartography and Statistics

Brazilian Geospatial Statistics

Pre-Census (from March to June 2010)

- **Review of urban Enumeration Areas performed by 32,000 supervisors hired for the Census:**

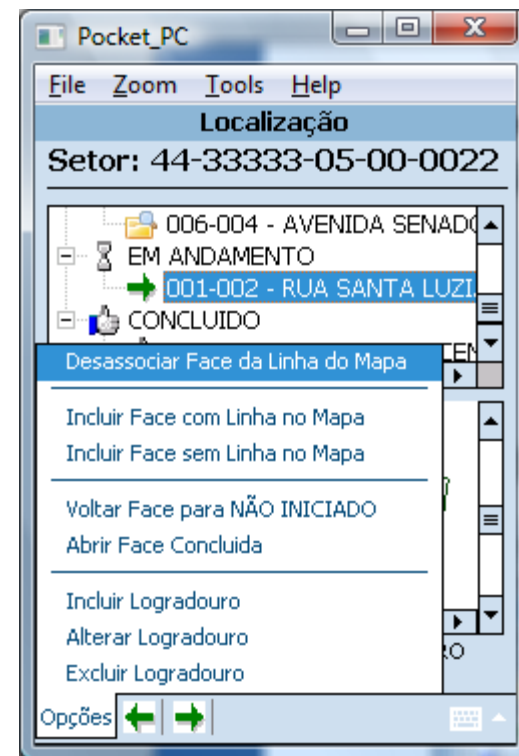

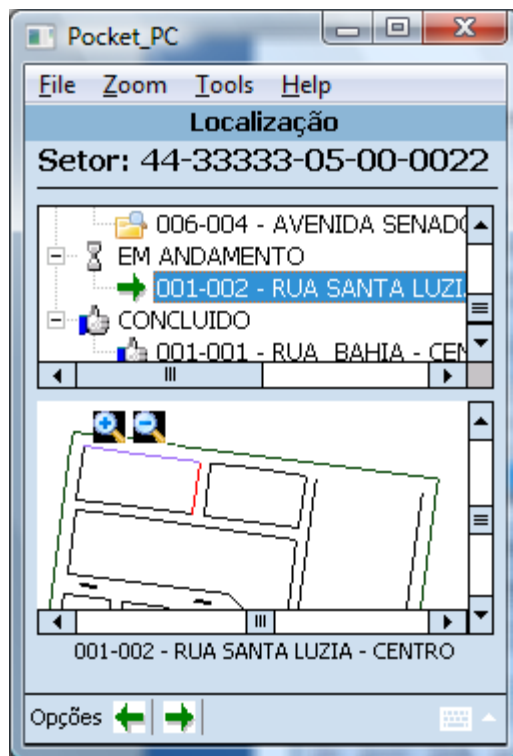

- Loading enumeration area maps and the list of streets and block-faces associated with the map
- Review / updating digital maps with PDA
- Review / updating association of addresses to digital maps
- Work unit: block-face

Duties of Supervisors for Quality Control:

- For each street: confirm, delete, include, change the name and/or change name's orthography
- For each block-face: include, exclude, confirm or classify as "NAR" (no addresses in the block-face) and collect surrounding characteristics (electricity, sanitation, security, etc.)
- Tracking with GPS the shape of block-faces not represented on the previous mapping

Pre-Census Application: 1st use of PDA

- **Personal Digital Assistant (PDA) application:**
 - The application was developed in Windows Mobile, using SQLServer CE 2005, Framework 2.0 and Geopad
 - Loaded in 30,000 PDAs

Pre-Census Application

- PDA application:
 - Some forms to collect data:

- Based on information of the Enumeration Areas and data collected during Pre-Census, some parameters were created by **Directorate of Statistics** to control quality of data collected by the enumerators during the Census;
- These parameters were loaded into control and monitoring IT System of data collection, being used by supervisors to assess the work of Census enumerators, in each 7,000 **Local Offices**;
- Address list raised by Pre-Census was used by 23,000 supervisors to route control work of 190,000 enumerators and for coverage control;
- **Data Quality was controlled for each Enumeration Area, calculating type of housing units rates, average number of persons per housing unit, sex rates, age, etc.**

▪ Questionnaires

- All **56.5 million** of **occupied housing units** were surveyed to collect characteristics of the dwellings and living people.
- IBGE used two models of questionnaires:
 1. **short form**, with 24 questions for housing unit and 13 for people;
 2. **long form** (**sample**) with 38 questions for housing unit and 69 for people (including same questions of the short form).
- The choice of questionnaire was done by **random selection** in the PDA during the Census time.
- The **average sampling rate is 11%**. The rates depend on the number of inhabitants of the municipality and varies from 5% (more than 500,000) to 50% (less than 2,500 inhabitants).
- **190,000 PDAs were used by enumerators to collect data**
- **Data confidentiality** – enumerators do not unlawfully download the information from the PDA. After ending an interview, data are encrypted and can only be transferred to the IBGE through a secure network.

- **Data collection:**
 - Running on the PDA in order to record the presential interviews, identify the households answering by Internet (token) and update the Address List.
- **Data collection / Internet**
 - WEB application to fill out the forms by the households.
- **Supervision:**
 - Running on the PDA to evaluate and control the enumerators work quality during the interview.
- **SIGPC - Management system for Data Collection Station**
 - Running on the **notebook** supports for all decentralized operations, supported administrative and operational tasks and the communication with the Central System

SIGC - Data Collection Management Indicators System

Monitoring evolution of data collection (coverage, quality and time of collecting) in each Enumerator Area.

- **Local application in Data Collection Station (Local Office) running at notebooks under Windows 7.**
- **SIGC system is essential tool for the administrative and operational organization and quality control of data collection:**
 - with registration of temporary work force
 - task association to staff
 - loading the application and Enumeration Area data into PDA
 - receive collected data from the PDA
 - communications with Central Datacenter
 - reports for quantitative and qualitative evaluation of data collected

- **SIGC - Data Collection Management Indicators System**
 - Monitoring evolution of data collection (coverage, quality and time of collecting in each Enumerator Area).
 - WEB application running in the main Datacenter support management reports, summaries, indicators and cartograms
- **Database system**
 - Specialized data model to store the summaries of the data collection, data of supervision, administrative data and List of Address File data.
- **Control of Data Collection**
 - Twice a day, Directors received a Summary of Census Progress Report.

SIGC - Data Collection Management Indicators System

IBGE

Headquarter
Directors of
IT, Operational,
Cartography
and Technical

27 Directors of 27 States

**27 Coordinators of ICT,
Operational, Cartography
and Technical**

**222 Operational Area Coordinators
222 ICT Coordinators of
Group of Municipalities**

**1,281 Sub-regional supervisors and manager of
Group of Local Offices
(quality control of Municipality collected data)**

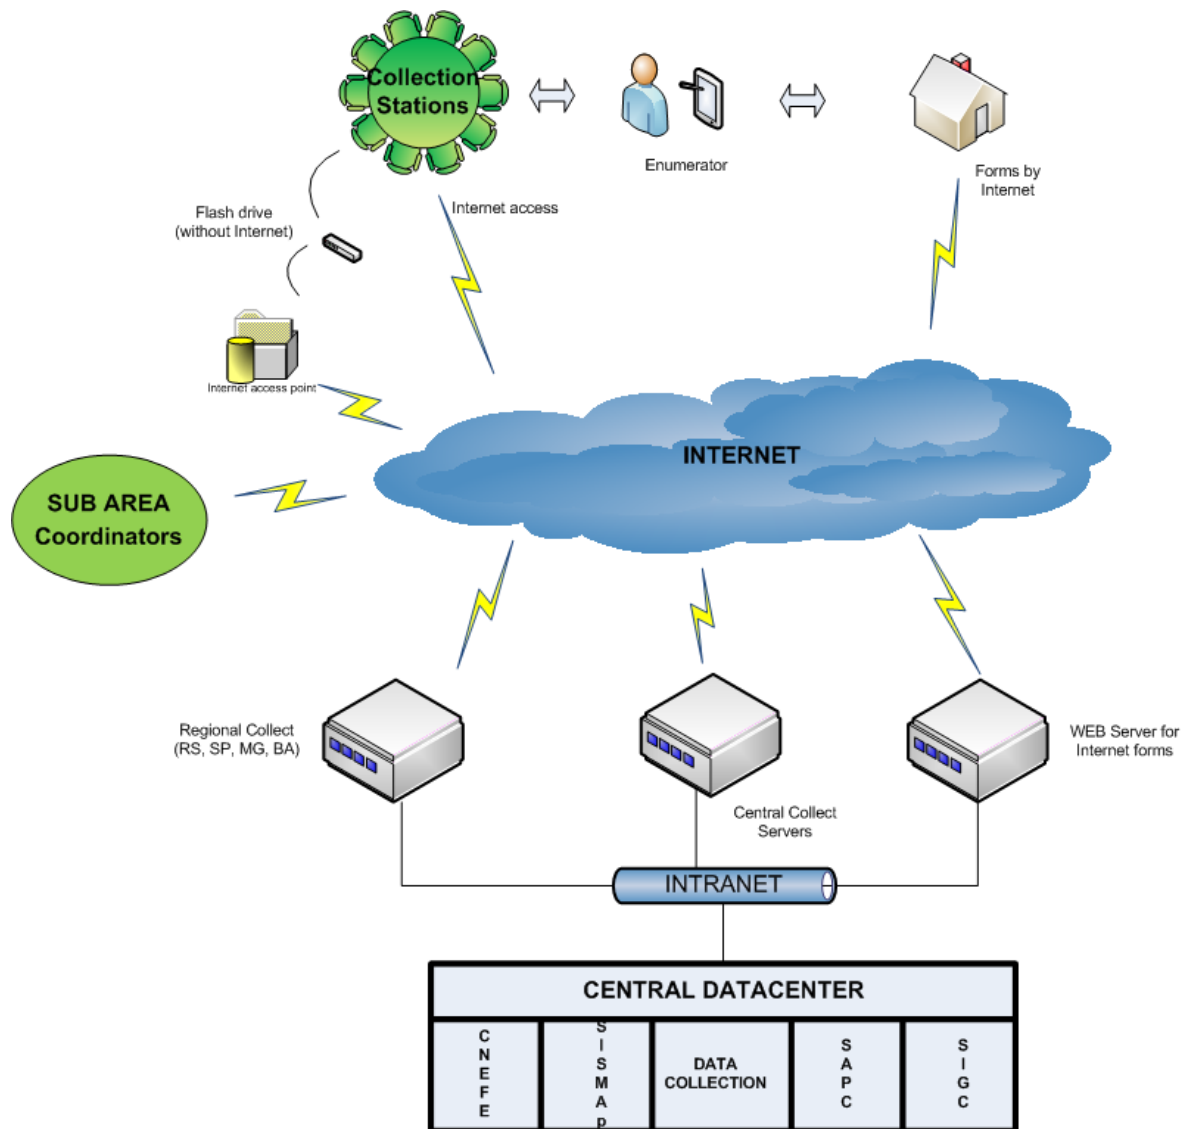

**6,000 Municipality Coordinators of Local Office (quality
control of collected data and send data to Datacenter)**

23,000 supervisors (quality control of field operation)

190,000 enumerators (interviewers)

- All data collection made with Personal Digital Assistant - PDA (there was no paper questionnaire).
- Each PDA was equipped with Enumerator Area Map; Questionnaires (short and long) and List of Address.
- **7,000 Census Collection Stations equipped with notebooks**
 - Census Collection Stations were equipped to operate autonomously, connected or not, to the Internet;
 - Interaction of PDAs was made solely on the notebooks of the **Collection Station**, regardless of a network of synchronous communication with the Central Processing;
 - In Collection Stations **without** Internet connection, communication with the Central Processing was done through **14,000 USB drives (Pen drives) physically carrying lots of information to some other point of Internet access.**
 - All ICT technical assistance (software, hardware and communication) were provided by **220 ICT Area Coordinators.**

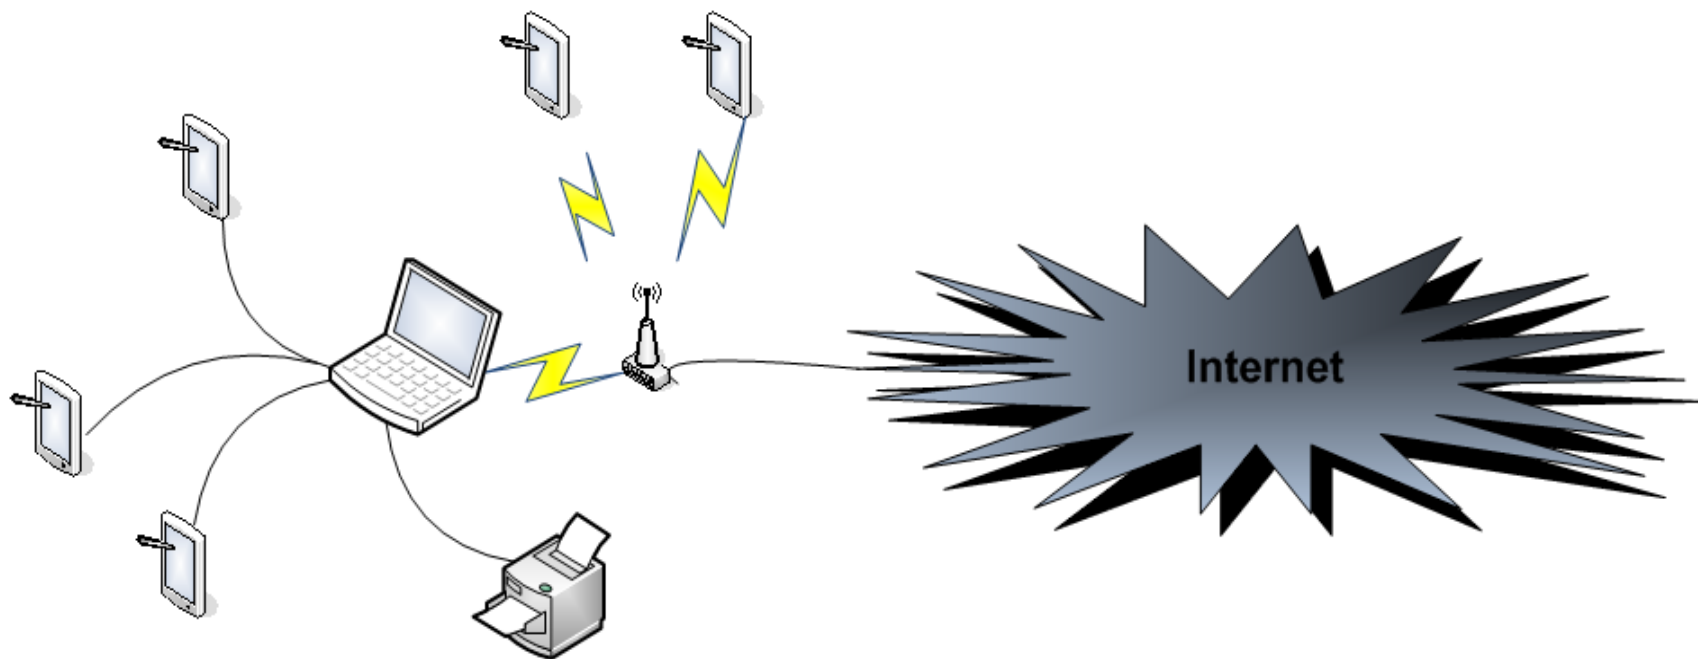

ICT model in the 2010 Census

- 150,000 LG-750Q, smartphones locked (Phone, 3G) to be used solely as data collection equipment and programs certified by the IBGE
- 70,000 PDA MIO-P550B (already used in 2007)

- **Notebook: 1 per 5 supervisors (8,687 notebooks)**
 - Blocked by “Content Advisor”
- **Router: 1 per Local Office (7,000 WiFi routers)**
- **Printer: 1 per Local Office**
- **Internet (where possible) or flash drive for physical transport of information for another place with access on Internet**
- **Supervisor and Enumerator: 1 PDA - MIO or LG**

The 7,000 Collection Stations were supported and supervised by these 1,281 Sub Area Coordinators.

One of the duties of these coordinators was to visit Local Offices under their supervision to provide quality control of collected data and organization.

Equipments:

- **Notebook: 1 per coordinator (1,300 notebooks)**
- **Desktop computer: 1 per Sub Area**
- **Router (with VoIP): 1 per office**
- **Multifunctional printer: 1 per office**
- **Broadband Internet**
- **3G Modem: 1 per coordinator**

- **2 links of 155 Mb/s for the exclusive operation of the Census 2010 in Rio de Janeiro (Headquarter)**
- **2 links of 20 Mb/s in São Paulo and Minas Gerais**
- **2 links of 12 Mb/s in Bahia and Rio Grande do Sul**
- **Subarea Coordination and Census Collection Stations :**
 - 3,783 mini modems 2G/3G
 - 139 antennas VSAT (Hughes)
 - 40 antennas BGAN (Tesacom)
 - 4,000 ADSL connections (leased, or by courtesy of others)
 - 1,000 Radio connections
 - 300 other types of connections
