

Encuentro Internacional de
**Estadísticas
de Género**

**Serie de 4 webinars: LOS RETOS PARA LA GENERACIÓN
Y USO DE LAS ESTADÍSTICAS DE GÉNERO EN
CONTEXTO DEL COVID-19.**

Session 1 “Information needs for effective responses and transformative gender policies in COVID-19 context”

➤ Importance of generating gender data during the COVID-19 pandemic

Real time data to monitor the gender impact of COVID-19

COVID-19: Emerging gender data and why it matters | UN Women Data Hub

data.unwomen.org

Dashboard on the health impact of COVID-19 **(with WHO)**

Conduct rapid gender assessment surveys on the impact of COVID-19

Development of policy tracker to monitoring how gender equality is integrated in COVID-19 countries' fiscal and policy responses **(with UNDP)**

Research, Reports, blogs etc. on the impacts of COVID-19 with partners

Collaboration with the **UN System** to produce a **global and country dashboard of indicators** to monitor the impact of COVID-19

Discussions with partners to conduct **rapid assessment violence against women survey** in 20-25 countries (upcoming)

Rapid gender assessments as one of UN Women's responses

Prior to the COVID-19 pandemic

33% for Latin America and the Caribbean in 2019

During the COVID-19 pandemic

Data on **gendered** impacts of COVID-19, such as:

- Access to healthcare and information
- Differential socio-economic impacts (income, employment, care work)
- Coping strategies
- Trends in gender-based violence

UN Women's response:
Rapid gender assessment surveys

Rapid gender assessments: Focus on relative changes and trends

- General aim is to provide information on the livelihoods and circumstances of women and men are affected by COVID-19
 - ✓ Simple
 - ✓ Low-cost
 - ✓ Quick to use
 - ✓ Easy to integrate
- Data collection modality - online survey, phone-call survey, survey via SMS
- Caveats
 - Focus on relative changes – not on exact measures
 - Limited reach of the survey e.g. to populations subscribed to a phone service, literate, with access to internet etc.
 - Countries are at different stages of the COVID-19 crisis, so care needs to be taken when aggregating or comparing results
- Ethical and safety principles are of utmost consideration, as well as maintaining data privacy and confidentiality – **DO NO HARM!**

Results show that COVID-19 has gendered consequences

Europe and Central Asia

report on 10 countries
(July 2020)

Asia and the Pacific

report on 11 countries
(July 2020)

Arab States

report on 9 countries
(August 2020)

- **Women report doing more unpaid domestic and care work than men.**
- Increases in the workload for both women and men, but women are shouldering the extra burden, particularly in terms of care of children and household-related chores.
- **Women sustained large drops in income from employment, savings, businesses and investments, farming and remittances.**
- But in Asia and Pacific, men are more likely to secure support from governments and non-governmental organizations.
- **High rates of mental and emotional distress are reported, with women reporting higher rates than men.**

data.unwomen.org/COVID19

Why these results matter as national responses are developed...

Some use cases of the rapid gender assessments on the impacts of COVID-19

- **Maldives**
 - Informed the country's **socio-economic impact assessment**, which forms the basis of integrated policy responses to COVID-19 and is used for designing mitigation strategies
 - Using the findings on loss of jobs and less paid work hours among women informal workers, the **COVID-19 Income Support Allowance** was extended to self-employed and in the informal sector
 - Informed **recovery plans of the COVID-19 recovery team** established by the Office of the President
- **Thailand**
 - Informed the **UNCT Socio-Economic Assessment**, which serves as basis for national response to the crisis
- **Jordan**
 - Informed UN Women's COVID-19 emergency response in **targeting cash assistance and GBV services**
- **Ukraine**
 - Canadian International Development Agency extended **its financial support to integrate a COVID-19 response** to an already existing project on "Advancing Gender Equality and Women's Empowerment through Decentralization Reform of Ukraine"

What's coming up in Latin America and the Caribbean...

Rest of the World

COMPLETED SURVEYS (37)

- Asia and the Pacific (11)
- Europe and Central Asia (16)
- Arab States (9)
- Africa (1)

ONGOING SURVEYS (2)

- Africa (2)

UPCOMING SURVEYS (19)

- Asia and the Pacific (3)
- Africa (16)

Latin America and the Caribbean

What's happening now...

- **Mexico, Colombia, and Chile** are working on conducting the rapid gender assessments
- Data collection is expected to begin in **September 2020**
- Done in partnership **with national stakeholders**

What still needs to happen...

- **More countries in LAC** to conduct rapid gender assessment surveys on the impacts of COVID-19
- **Demonstrated use** of the results of the rapid gender assessments once available
- **Sustained partnerships** with national partners *and* the private sector

From insights to action: Gender equality in the wake of COVID-19

1. Health Impact
2. Impact on jobs
3. Impact on poverty by sex and age -- new projections to 2030!
4. Impact on unpaid care work and time poverty
5. The shadow pandemic: violence against women
6. Gender data gaps for a better response

Immediate health effects: still a lot we don't know

COVID-19 is causing unimaginable human suffering

Globally, more than

25 million people had been infected and over **846,000** people had died, as of August 2020.

The majority of cases are among men (53%), yet women account for more than 63% of cases in the 85+ age cohort (provisional analysis).

Marginalized groups are more likely to die from COVID-19

In the United Kingdom, Black women are 4.3 times more likely than white women to die from COVID-19.

Women's access to sexual and reproductive health care is paramount

- Before the pandemic, **810 women** died from preventable causes related to pregnancy and childbirth every day.
- In sub-Saharan Africa, only **60% of births** are attended by skilled health personnel.
- In Brazil, the maternal death rate due to COVID-19 is **2x higher** among Black women than white women.
- In Azerbaijan and Turkey, **60% of women** have had trouble accessing gynaecological and obstetric care as a result of COVID-19.

Governments need to gather more and better data

As of July 2020, only

37% of confirmed cases had been reported to WHO had been disaggregated by sex and age.

Disaggregated data on COVID-19 are essential to fully understand the virus's transmission and its impacts. Insights from these data will ensure that measures in place will reach those who are highly at risk and most in need.

- Men are 53% of confirmed cases and limited data also shows higher mortality
- women account for more than 63% of cases in the 85+ age cohort
- But the data is still quite incomplete, and many questions remain unanswered (e.g. deaths by sex and age)

COVID-19 exposes and exploits pre-existing inequalities

- Poor and marginalized communities are more vulnerable to COVID-19: **Black women are 4.3X more likely than white women to die from COVID-19 in the UK**

Sexual and reproductive health services must get priority

- In Asia and the Pacific, 60% of women report difficulties seeing a doctor as a result of the pandemic
- COVID-19 could lead to an additional 56,000 maternal deaths

COVID-19 Will push millions more into extreme poverty

The COVID-19 crisis will likely increase female poverty

Gender poverty gaps will worsen by 2030

Gender-responsive policymaking is key for closing gender poverty gaps

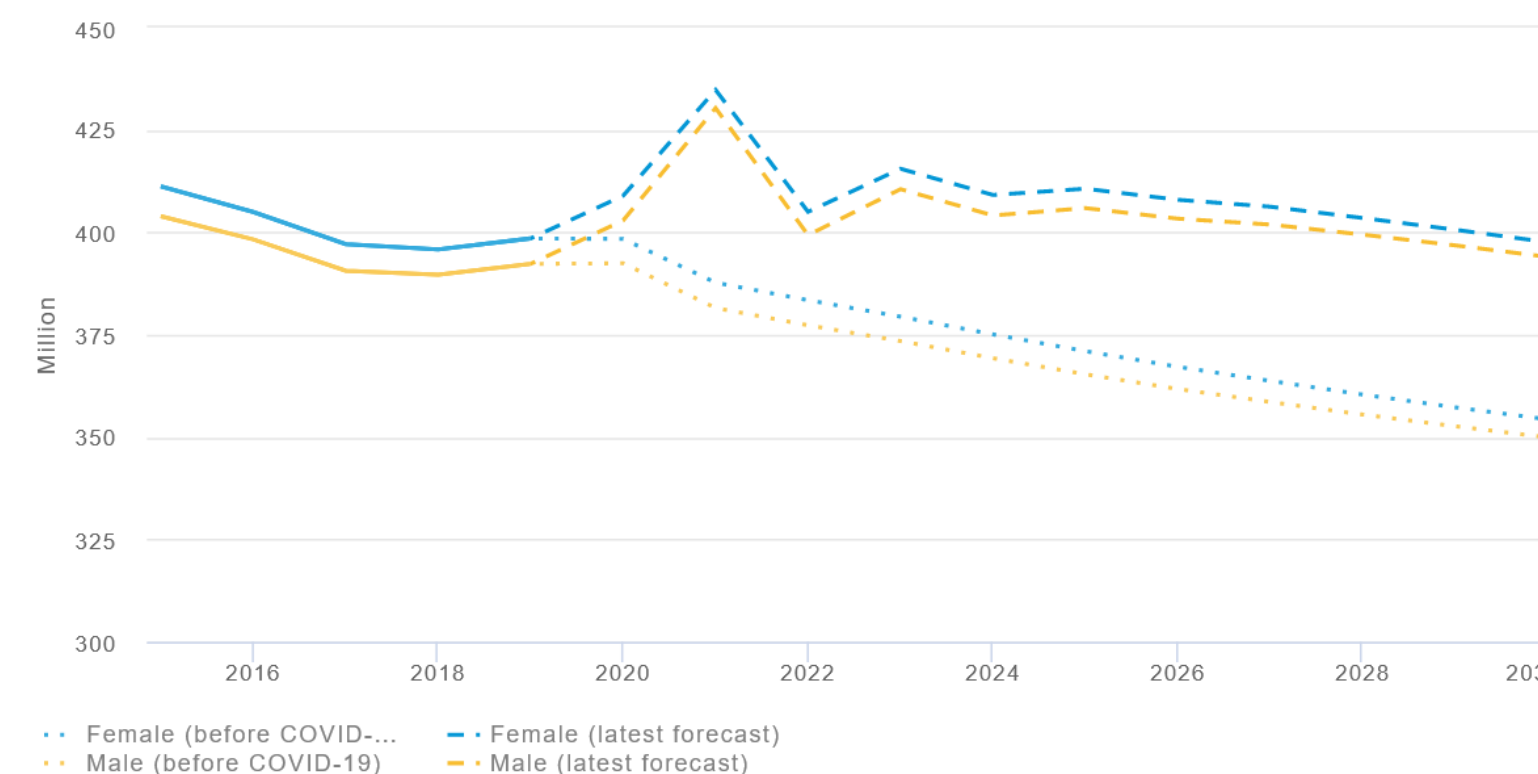

New poverty forecasts commissioned by UN Women and UNDP and conducted by the [Pardee Centre for International Futures](#) at the University of Denver, offer the **first global estimates of extreme poverty by sex and age**, taking into account the economic fallout from the pandemic.

Unless measures are taken to shield the most vulnerable, 435 million women and girls will be living on less than \$1.90 a day worldwide by 2021 – **including 47 million as a result of COVID-19**

And it gets worse with time for women aged 25-34: In 2021, it is expected there will be **118 women in poverty for every 100 poor men** globally, and this ratio could rise to **121 poor women for every 100 poor men by 2030**.

Global population living below the international poverty line by sex, all ages

Gender data need to be prioritized

Investment in gender data collection is low on the priority list for National Statistics Offices

The needs of marginalized women and girls remain invisible when gender data are incomplete or missing

UN Women's rapid gender assessment surveys are filling some of these gaps

Adequate and timely gender data and statistics need to be fully prioritized as part of the COVID-19 policy response

Closing the gender data and information gap will require:

- 1. Collection of real-time COVID-19 data on incidence, hospitalization, testing and mortality.** Scientific studies, research and assessment of the impact and response to the pandemic must be inclusive and consider sex and gender as relevant factors
- 2. Greater support to National Statistical Systems, strengthening of gender data collection and integration of a gender perspective in all statistical operations**
- 3. Investments in dissemination and use of gender data.** Information on the differentiated impact of the crisis must be accessible and used to inform prevention and response efforts

THANK YOU

Papa Seck

UN Women Chief Statistician and Officer-in-Charge, Research and Data Section
